

# LumaLux Shelf Installation Instructions

Each LumaLux shelf includes heavy-duty arc-style brackets designed for safe, long-term support. While slightly more involved than traditional floating shelf hardware, these brackets offer stronger, more stable installation - ideal for laminated MDF and open-back shelf designs.

## What's Included:

- Arc-style powder-coated steel brackets
- Screws and anchors (may vary by kit)
- Optional L-brackets for added stabilization (select sizes)

## Tools You'll Need:

### Tools You'll Need:

- Power drill
- Screwdriver
- Level
- Stud finder or heavy-duty drywall anchors
- Countersink bit (recommended for anchor screws)
- (Optional) construction adhesive

## Installation Steps:

1. Position the Brackets: Lay your shelf face down. Place the arc-style brackets so the horizontal arms fit just beneath the top panel inside the open back of the shelf.

2. Optional: Carve Recesses: For a flush fit, you may route or chisel shallow grooves where the bracket arms will sit.

This is optional, but improves stability and appearance.

3. **Drill & Secure the Shelf:** From the top panel, carefully predrill small holes down into the bracket arms. Use short screws (3/4" max) to anchor the shelf to the brackets. Use a countersink bit to ensure screw heads sit flush with the surface.
4. **Mount to the Wall:** Use a stud finder to locate wall studs and anchor the vertical bracket arms directly into them. If studs aren't available, use high-quality wall anchors rated for your shelf load.
5. **Level and Tighten:** Use a level to ensure your shelf is perfectly straight, then fully tighten all hardware.
6. **(Optional) Add Adhesive or L-Brackets:** For high-traffic areas or heavier shelf use, add a line of construction adhesive inside the shelf frame or use included L-brackets for extra stabilization.

#### Safety First:

We recommend installing one bracket every 10-12 inches of shelf length. Always anchor into studs when possible. If you're unsure about your wall type or installation method, consult a qualified contractor.

#### Safety Disclaimer:

Improper installation of wall-mounted shelving can result in property damage, injury, or shelf failure. It is the responsibility of the installer to ensure that all mounting hardware is securely fastened into wall studs or an appropriately rated anchor system for the specific wall type and load requirements.

LumaLux shelves are designed for decorative and organizational purposes only. Maximum weight capacity depends on correct installation and bracket spacing. We recommend one bracket every 10-12 inches of shelf length, anchored into wall studs whenever possible.

Use caution when drilling into walls to avoid electrical wiring, plumbing, or other hidden infrastructure. If you are unsure about your installation environment or wall structure, consult a licensed contractor or professional installer.

Luma and its affiliates are not liable for damage or injury caused by improper installation, modification, misuse, or failure to follow provided instructions.
